

**METHODS AND DEVICES FOR CONTROLLING A TEMPERATURE  
OF AN APPLICATOR BODY**

**ABSTRACT OF THE DISCLOSURE**

The present invention provides devices and methods for treating tissue. In one embodiment the present invention provides a method of controlling a temperature of an applicator body, the method comprising providing an applicator body that comprises at least one contact surface. A coolant is delivered through at least a portion of the applicator body at a substantially constant rate. Energy is delivered to the coolant through a heating element so that the contact surface of the applicator body is cooled to a desired temperature.
